

ABSTRACT

The invention seeks to provide a cement distributing vehicle, which permits greatly reducing labor, time and cost require for packed cement distribution, permits manufacturing a compact vehicle without sacrifice in the great tank capacity, and permits efficient distribution even to bad distribution condition destinations. In a cement distributing vehicle 1 which comprises a powdery cement accommodating tank 2, an automatic packing machine 3 for packing a predetermined quantity of powdery cement from the power cement accommodating tank, and a flywheel PTO shaft for taking out the engine torque to the outside, and in which the vehicle personnel packs and distributes a required quantity of cement by using the automatic packing means according to an order of a person desiring purchase of packed cement, a generator is connected to the flywheel PTO shaft for power supply from it to vehicle-mounted component devices such as the automatic packing machine.
